# Personal Web Pages

Where is your web page?

The URL for your web page is: `cs.utexas.edu/~CSID`

Example: Mike Scott's is: `cs.utexas.edu/~scottm`

Note: In general they don't work well on mobile devices unless you configure them properly.

Getting Started

You'll notice that if you try to go to your page now it is pretty weird looking. To fix that you create an "index.html" file inside the "public_html" folder in your home directory on the linux machines. This "index.html" will be your homepage. Be sure to run the command "`chmod 755 [fileName]`" on any page/document you put in your public_html folder (including the index.html one).

Basic HTML

For you web page you will probably want to learn the basics of HTML. HTML is less like a programming language and more like a series of tags.

What should go on it?

- Your resume
- Personal projects you're proud of
- General information about you (including your email address)
- Anything you think would be impressive to recruiters

What SHOULDN'T go on it?

- Your address
- Your phone number
  - this is a gray area, some people are comfortable putting it and others aren't
- Anything you wouldn't want recruiters/ the administration to see

Some More Advanced Stuff

To make your make page look awesome you can use things like:

[Twitter Bootstrap](#)

[Jquery UI](#)

[CSS](#)(Cascading Style Sheets)

For dynamic content you could look into:

[JavaScript](#)

[AngularJS](#)
